

# DARK-SIDE

## Logos Carousel

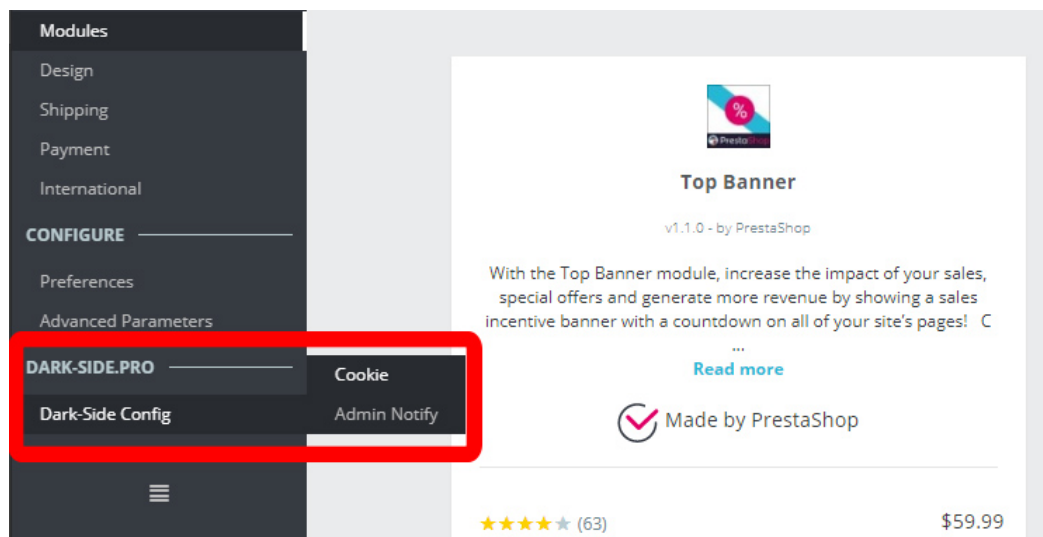

### User Manual

## Install manual

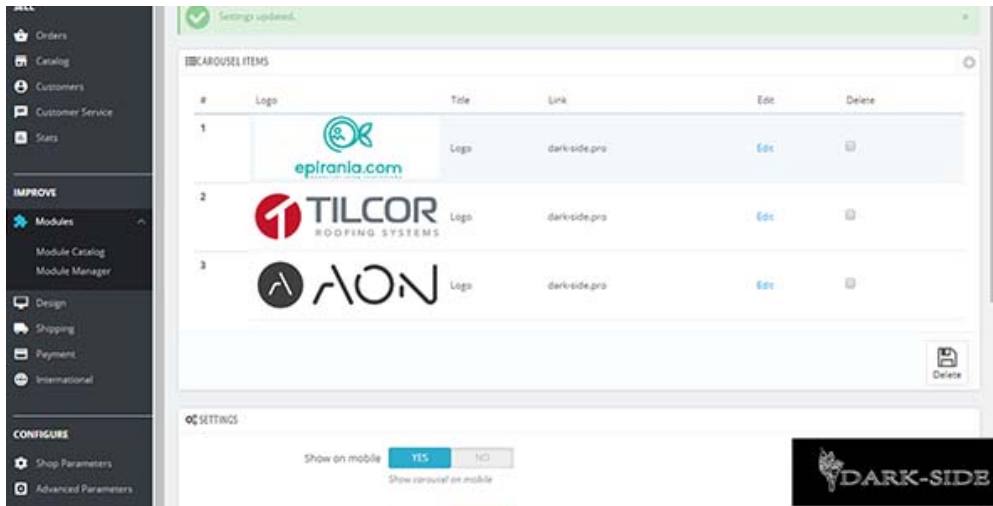

1. Download module
2. Unzip (decompress) the module archive file.
3. Using FTP software copy the folder in your server PrestaShop /modules.
4. Login to the BackOffice of your shop.
5. Go to Back Office >> Modules.
6. Find module that you want to install.
7. Find, and click Install button.

## Configuration manual

You can find our modules in Dark Side Config menu in back office.

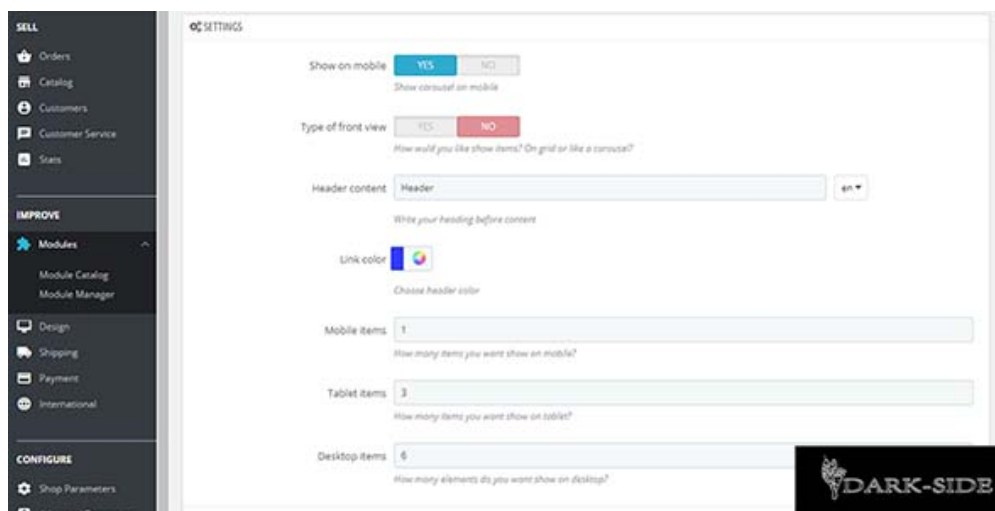

In our module, you can add several logos of your partner, link their sites. The module automatically adjusts the size of the graphics with only one click.

You can also decide about order of logos, and their alt information (Our module – as always – is SEO-friendly). Every information can be easily edited.

In global option, you can set header information, colour, quantity of logos in desktop, or mobile view (our modules are always RWD standardised). Every text information is compatible with Prestashop translation engine.

Thank you for using our modules
